Subject: Enterprise Fire Update as of 16:30

OSC Ruhl has demobilized from the site and is enroute back to Dallas. Ruhl was officially notified by the PRP about an hour ago that the fire is out. Since the last update, EPA continued to monitor the PRP's air monitoring activities. EPA collected the two SUMMA canister samples and sent the canisters to the Houston Lab for analysis. Prior to leaving the site, OSC Ruhl coordinated an exit interview with TCEQ, THRC, and the PRP. Currently the PRP is continuing to monitor the pipeline to confirm no additional vapor's are being emitted. OSC Ruhl has coordinated with the enforcement division on the potential applicability of CAA 112 (j). There was a death associated with this incident.

The fire continues to burn at the Enterprise facility located in Mont Belvieu, Texas despite Enterprise's effort to isolate the fuel source. The fire is considerably smaller than yesterday. EPA continues to have one OSC (Ruhl) and 6 START contractors on scene. EPA has been observing Enterprise's air monitoring effort. EPA accompanied the PRP during roving air monitoring in the area last night (included 8 residential locations). No elevated readings were observed. EPA has also deployed limited air monitors and collected two SUMMA canister samples. Air monitoring locations included the perimeter of the facility fence line, adjacent facilities, and the closest residential areas (nearest resident approx 1 mile away). EPA will conduct a survey of the ditch that fire fighting water drained into this morning. There has been significant media attention to the fire. One person is still not accounted for. OSHA and TCEQ have been on scene.
